Brick and Slimbrick® Natural Stone Cultured Stone Concrete Masonry Units

At Mutual Materials, we are proud of what we do and are inspired to see our products chosen by professionals to build communities. Our products build beauty that lasts through hospitals, schools, stadiums, businesses, family homes, public parks, and backyards. Mutual Materials has long served a professional network of architects, interior designers, builders, masons, and landscape design professionals. Today we also serve residential homeowners, both through our professional networks and through our retail branch locations.

Kendall Anderegg President, Mutual Materials

A Message from our President

Have you ever spent time looking at your local sports stadium, or your child's school, or even your neighbor's backyard and wondered where the products come from that put it all together? Well, that's what Mutual Materials does – we have been part of building beauty that lasts over one hundred years. Since 1900, we have been providing masonry and hardscape products to customers in the Pacific Northwest to help them create inviting communities that stand the test of time. Our products are used to create schools, stadiums, public landscapes, business parks, family homes and gardens, and much more.

Mutual Materials is also a family business and we locally manufacture the products we sell. From humble beginnings with one brick plant in 1900, we have grown today into a major regional employer operating more than 10 manufacturing plants and 16 branch offices across Washington, Oregon, Idaho, Montana, and British Columbia.

Our Idea Book for Home Exteriors has photos from real homes across the Pacific Northwest. In the back, you will find all of our product styles, shapes, sizes and colors of natural stone veneers, clay bricks, and CMU. You can also find more product details, installation instructions, online shopping and store locations online at www. mutualmaterials.com.

On behalf of the team here at Mutual Materials, we appreciate our customers and thank you for considering our products to build your home and yard improvement projects.

Sincerely,

indall Amdung

Kendall Anderegg V President, Mutual Materials

Masonry can add distinctive character to any architectural design using elements such as stone, clay brick, and even large size concrete masonry units (CMU). Define your unique style with masonry.

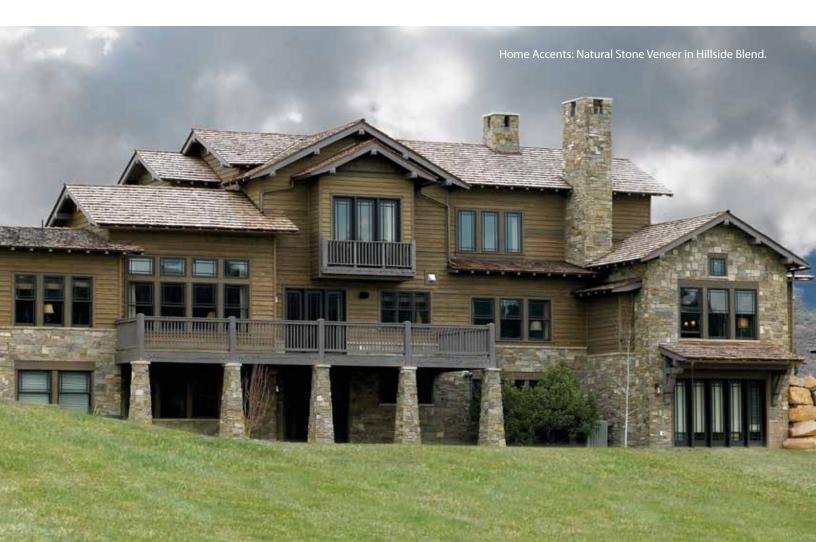

HOME EXTERIOR TRENDS

New improvements in masonry includes lightweight thin brick, natural stone, and faux stone that's easier to install. Popular colors choices are now moving away from the traditional reds and browns found on most masonry exteriors, and moving towards whites, grays, and blacks.

When considering the veneer for your home, you can't go wrong with masonry because it's waterproof, fireproof, insect proof, and structurally solid. Once you have made the decision to go with masonry, you really just need to think about the look you want. Brick and stone are versatile and allow any style from traditional to contemporary.

MASONRY EXTERIOR DESIGNS

- Clay brick is the ultimate masonry choice because of its blend of beauty and function. Colors range from white to black and red to brown.
- Natural stone is quarried directly from the earth and provides a rustic sophistication to your home's veneer.
- Cultured Stone is great choice for a home's exterior because it provides the elegance of natural stone, but it's lighter and easier to install.
- Concrete Masonry Units (CMU) are commonly thought of as a more commercial product, but are becoming a popular choice for new homes because of the clean modern look.

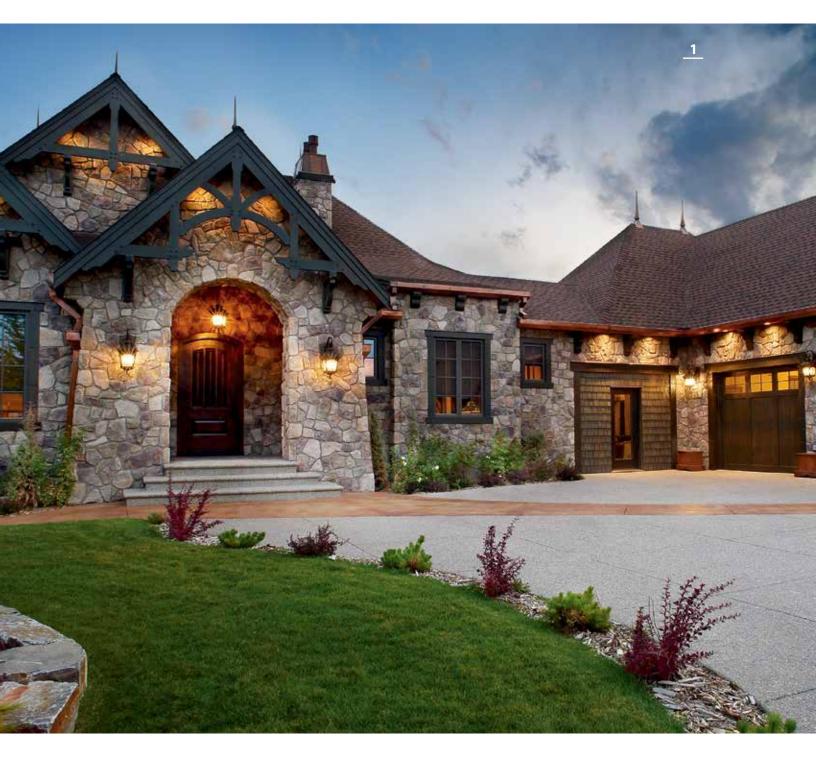

Home Exterior and Planters: Ground Face Concrete Masonry Units in Charcoal.
Entryway: Vancouver Bay Architectural Slabs in Charcoal.

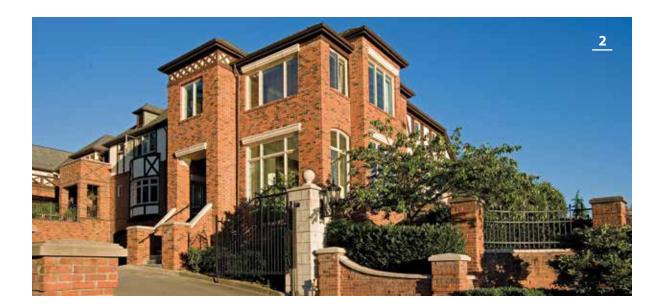

- 1. Home Exterior: Cultured Stone® Dressed Fieldstone in Bucks Country.
- 2. Home Accents: Brick in Westport Used.

Luxury urban living in the Pacific Nortwest features the latest materials and colors, such as dark colored brick, mixed with traditional products and environmentally-friendly designs.

URBAN LIVING DESIGN TRENDS

In the city, building designs vary from neighborhood to neighborhood, block to block. Building exteriors range from steel to wood to glass to brick, depending on whether a designer wants to blend into an area or standout from the crowd.

Mixed-use buildings or townhomes are often designed with either concrete masonry units (CMU) or brick because of their versatility in appearance and structural performance. While reds have often been the choice for a timeless look, designers are now going with whites and dark colors to being a contemporary aesthetic to their projects.

URBAN LIVING EXTERIORS

- Concrete Masonry Units (CMU) are usually hidden behind a building's veneer, but now smooth (or ground faced) units are being showcased on exteriors because of their clean, modern look.
- Face brick is fireproof, insect-proof, and provides excellent thermal performance, in different shades of red, brown, yellow, white, gray, and black.
- If your project requires the look of brick but is encountering some issues with weight of a full-size unit on higher elevations, consider Slimbrick, a half-inch brick that can be installed over any substructure and give you the look of brick you need.

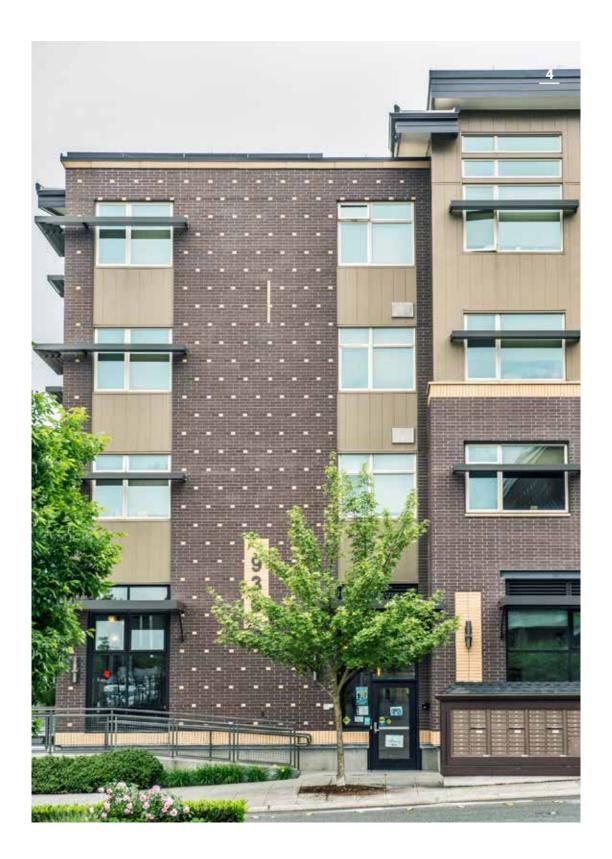

Building Exterior: Slimbrick[®] in Teal Brown, Tan Terra, and Brown Varitone.
Building Exterior: Brick in Castle Gray, Wheat, Goldenrod, and Seattle Cream.

- 1. Column: Slimbrick[®] in Ebony.
- 2. Column: Forest Blend.
- 3. Building Accent: Slimbrick® in Ebony.
- 4. Building Exterior: Brick in Mauna Loa.

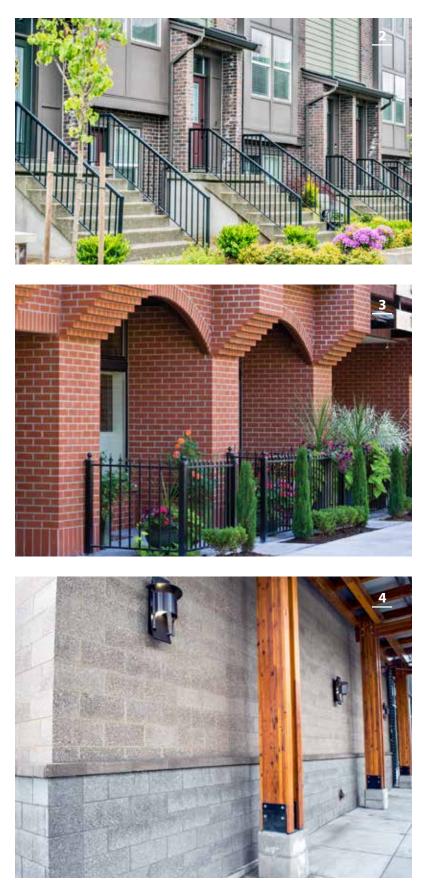

Building Exterior: Ground Face Concrete Masonry Units in Castle White and Charcoal; Split Face Concrete Masonry Units in Burgundy Red.

 Building Exterior: Cultured Stone® in Echo Ridge Southern Ledgestone.
Building Exterior: Brick in Covington.
Building Exterior: Brick in Imperial Red.
Building Exterior: Ground Face Concrete Masonry Units in Khaki and Charcoal .

Can I install my own project even if I've never done this sort of work before?

Yes you can. Use the installation instructions, design ideas, and tips on our website www.mutualmaterials.com to guide your project.

What type of maintenance do Mutual Materials pavers require?

Our pavers require minimal maintenance. Simply pressure wash or use a leaf blower on your project approximately once per year. You may need to sweep more sand into the joints after pressure washing.

Do I need to seal my pavers?

No. However, sealers do offer 3 key benefits:

- 1) Sealers help resist penetrating stains.
- 2) Sealers enhance the color.
- 3) Certain types of sealers can bind the sand particles in the joints reducing the ability of weeds to generate.

Will weeds grow between my pavers?

Weeds and grass may start to grow between your pavers from seeds and spores blown in by the wind. When this happens you can easily pull them out or use a spot weed killer, or herbicide - it won't damage the pavers.

What is the white haze or powder on the pavers?

This is known as efflorescence. All concrete products contain cement which produces water-soluble calcium oxide. Calcium oxide inside the pavers reacts with water and—when carried to the surface through capillaries—reacts with carbon dioxide to form a haze of calcium carbonate.

It is a natural process and will wear off in time. The amount of efflorescence is difficult to predict but it does eventually go away. Some speciallyformulated cleaners may also be used to wash away efflorescence.

What do I do if my pavers become stained?

One of the great benefits to concrete pavers is that the individual stained or damaged pavers can be removed and replaced. Remove the sand around the paver(s) and then use two flat-head screwdrivers to lift them out. It's a good idea to keep a few extra pavers in your shed or garage for just this need.

How tall can I build my retaining wall?

The maximum height you can build your wall depends on the retaining wall block you have chosen. The maximum heights for our walls are:

- ManorStone 3' 6"
- CypressStone 4'
- Roman Cypress 4'
- CornerStone: 50 Series 3'; 100 Series 4'; 200 Series 6'

Do I have to bury part of the bottom course of my wall?

Retaining wall blocks need to be securely anchored in the ground. If your wall is three (3) courses or fewer tall, we recommend you bury half of the bottom layer. If your wall is four (4) courses or more tall (up to the maximum recommended height), we recommend burying the entire bottom layer.

If I'm building terraces, how far apart should they be?

The distance between terraces (face of wall to face of wall) should be at least two times the lower wall height. For example, if your lower wall is 2 feet tall, you need to go back 4 feet before building your next wall.

What are the advantages of Mutual Materials retaining wall blocks versus using landscape timbers?

Our retaining wall units are available in a variety of styles and colors to blend with your home's exterior. And unlike products made from untreated wood which rot, warp, and become insect and rodent motels, our products are made to be durable, flexible and timeless.

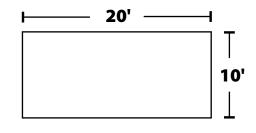

Will the color vary between runs of products?

Color may vary from one run to the next. It is best to buy all the product for a project at once. We recommend mixing product from different pallets in order to get a more consistent color in your project. This is also known as blending pallets.

PAVING STONE PROJECT

STEP A: Find total square footage

- 1. Make a drawing of your project (to 1 inch scale if possible).
- 2. Choose your stone shape and color.
- 3. Find the total square footage of your project using Step B below.
- 4. Locate your stone square footage on the product price label.

STEP B: Formula to determine stones for the project

1. Multiply the length by the width to get the total square footage of the project.

2. Multiply the total square footage of the project by square footage of the stone you chose.

RETAINING WALL PROJECT

How many stones do I buy? 4" x 12" Wall Block

(Stones required per square foot of wall surface area)

# of Courses	Wall Height	5'	10'	15'	20'	25'
