HARDSCAPE PRODUCT SELECTION GUIDE

Since 1900, Mutual Materials supplies the masonry and hardscape products that build the Pacific Northwest.

Visit us online at mutualmaterials.com

Mutual Materials is where I start.

Their products have a **depth and character** that feels like it was crafted specifically for my projects. They're made here, and **built to last through all four seasons** in the Pacific Northwest.

—ARCHITECT | PORTLAND, OREGON
25+ YEAR INDUSTRY VETERAN

BUILT ON TRADITION. MADE FOR WHAT'S NEXT.

125+ years of craftsmanship, trusted by generations of builders across the Pacific Northwest.

Mutual Materials has been making brick in the Pacific Northwest since 1900. 125+ years later, we are still here. Still family-operated. Still grounded in the same region we started in. Our work is in stadiums and schools, hospitals and storefronts, front walks and backyards across the Northwest.

This guide is for the people who build.

Homeowners who dream of a beautiful outdoor oasis. Architects who design for the long-term, not just what's trendy now. Contractors who have set our brick for decades, often spanning generations of sharing their craft, just like us. Our job is to be the partner each of you can count on. Building beauty that lasts.

Thank you for considering us. Whether you are designing for your next project, running a crew, or planning a weekend patio, we are glad to be part of your build. Our customers are the reason we have been here for 125 years, and the reason we will continue to be here for generations to come.

KENDALL ANDEREGG
President, Mutual Materials

ROMAN & CLAY

Warm underfoot. Welcoming at first glance. Clay pavers bring a sense of place to driveways, walkways, patios, and plazas that only real clay can, with fired-in color that holds over time without fading. Elegant, rustic, or traditional, the range of colors, textures, and installation patterns gives room to be creative with a surface that works. Sand-set or mortar-set, they work across a wide range of residential and commercial applications.

Suitable for vehicular traffic.

OLD DOMINION

Some patios fill a space. With embossed edges and natural colors, Old Dominion patios define it. Circle Kits arrange paving stones in concentric circles, creating a natural focal point that gives a backyard purpose and structure. Beyond patios, the same kit works for fountains and other outdoor features. Squares & Rectangles carry the feel of turn-of-the-century cobblestones into modern outdoor spaces.

Suitable for vehicular traffic.

AVAILABLE COLORS

Cascade Blend

Summit Blend

TURFSTONE®

Turfstone permeable pavers let natural grass grow through the surface, keeping the landscape alive while the pavement holds its ground. Rainwater filters through to the soil beneath, reducing erosion and preserving what's underneath. A paver that works with the land, not against it.

Suitable for vehicular traffic.

AVAILABLE COLORS

Natural Gray

Stocked at select locations. Contact your local branch for availability.

DIMENSIONS

	W x L x D (in)	W x L x D (mm)	Unit Coverage

Turfstone 	15 $\frac{1}{2}$ x 23 $\frac{1}{2}$ x 3 $\frac{1}{4}$	400 x 600 x 90	2.6 pcs/sqft

ECO-PRIORA®

Patented interlocking spacer lugs give Eco-Priora permeable pavers secure structural performance under heavy vehicular traffic. They hold their ground where other rectangular permeable pavers fall short. When designed in a permeable pavement system, LEED® "heat island" and "runoff" credits may be available. Flat, durable, and ADA compliant, the surface works just as well for pedestrians as it does for vehicles.

Suitable for vehicular traffic.

UNI ECO-STONE® & ECOLOC®

Uni Eco-Stone® & Ecoloc® are innovative, permeable paving systems built for driveways, parking areas, and patios. Interlocking concrete pavers, built for industrial and commercial projects where durability and stormwater runoff matter. Both support heavy vehicles while keeping water moving through the surface and off the site. Flat, durable, and ADA compliant when installed and maintained properly, they hold up under use.

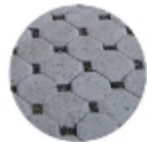

Suitable for vehicular traffic.

BARKMAN™ BOARDWALK 80MM

Good design organizes a space before anyone can explain why. Boardwalk pavers work that way. The eight-piece linear system creates directionality and draws the eye toward a focal point, giving patios, plazas, and entries the kind of considered structure that feels deliberate without announcing itself.

At 3 inches thick, it holds up where the demand is highest: driveways, plazas, high-traffic patios where the surface is part of the architecture, not just the finish. Wide spacers allow it to perform as a permeable paver where drainage is a design or site requirement. Machine compatible for larger installs, keeping pace with the project without sacrifice.

Suitable for vehicular traffic.

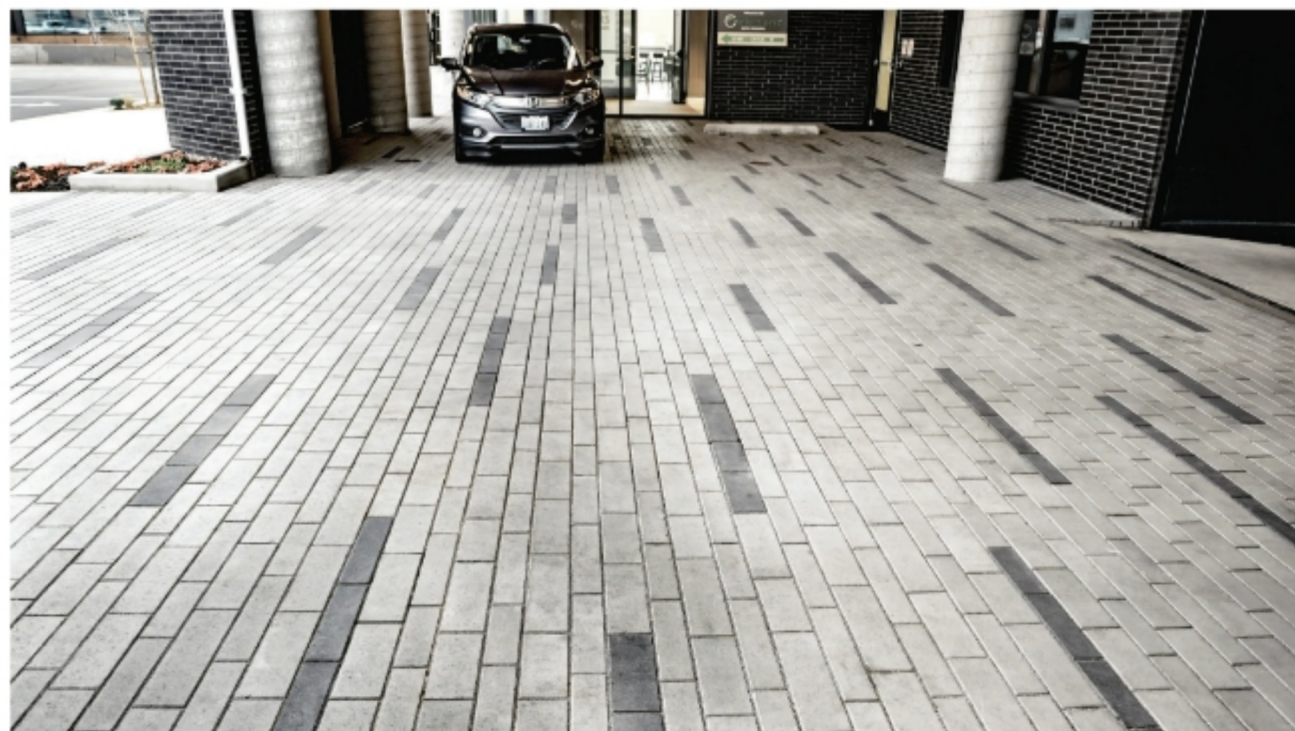

AVAILABLE COLORS

BARKMAN™ VERANO

Detail-forward design starts from the ground up. Smooth surface, refined edges, and a profile that accentuates modern architecture without competition. At 2 inches thick, it's built for real use: driveways, entries, high-traffic areas where surface shouldn't compromise. Verano pavers are available in a chamfered finish for a more textured appearance, or non-chamfered by custom order for installs needing a flush, uninterrupted surface with tight joints, including applications requiring ADA and CDA compliance.

Suitable for vehicular traffic.

COLUMBIA PATIO SERIES

The most attractive patios and walkways draw people in through color, texture, and surfaces that invite people to gather. Columbia patio slabs come in two textures: Smooth is clean and even, while Slate has a rippled surface that reads like natural stone. Three sizes, used alone or combined. The rectangular format opens up the design and gives you room to set a pattern that fits the space. Larger dimensions mean fewer units per square foot, and a surface that settles into the landscape without crowding itself.

AVAILABLE COLORS

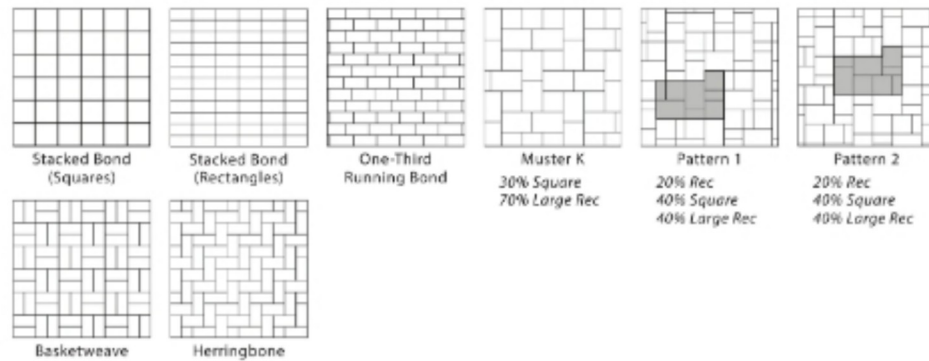

Cascade Blend Northwest Blend Summit Blend

NATURAL STONE

FLAGSTONE

DIMENSIONAL STONE

CAPS & ACCESSORIES

NATURAL STONE

FLAGSTONE

Flagstone Pavers® bring a natural, rustic character to patios, walkways, and pool decks. These large stones come in rich colors and lay flat in either sand or mortar, giving installers flexibility depending on the application. The stone won't warp in the elements, resists termites, and the natural surface texture provides traction and limits water pooling. A straightforward alternative to stamped or poured concrete with more character and better long-term performance.

RETAINING WALL BLOCK

CORNERSTONE®

A retaining wall does real work to hold back soil and manage grade changes. CornerStone is built to do that at any scale. For a backyard hillside or a sloped front yard, a gravity wall handles the job. Stacked and solid, no reinforcement needed. For larger commercial projects where walls climb to 30 feet or more, CornerStone carries the load using geogrid, a reinforcing layer built into the soil behind the wall. Built for the Pacific Northwest, it holds up through wet winters and seismic activity, flexing under stress rather than cracking.

Gravity walls build to four feet without reinforcement. For anything taller, the wall needs to be engineered. Your local branch can point you to the right resources.

100 Split Unit Tapered	Natural Gray	12 × 18 × 8	305 × 457 × 203	1 pcs/sqft

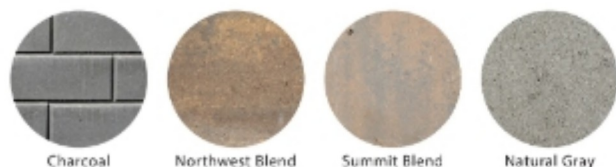

All corners and caps are universal to the Near Vertical unit.

CORNERSTONE® SMOOTH

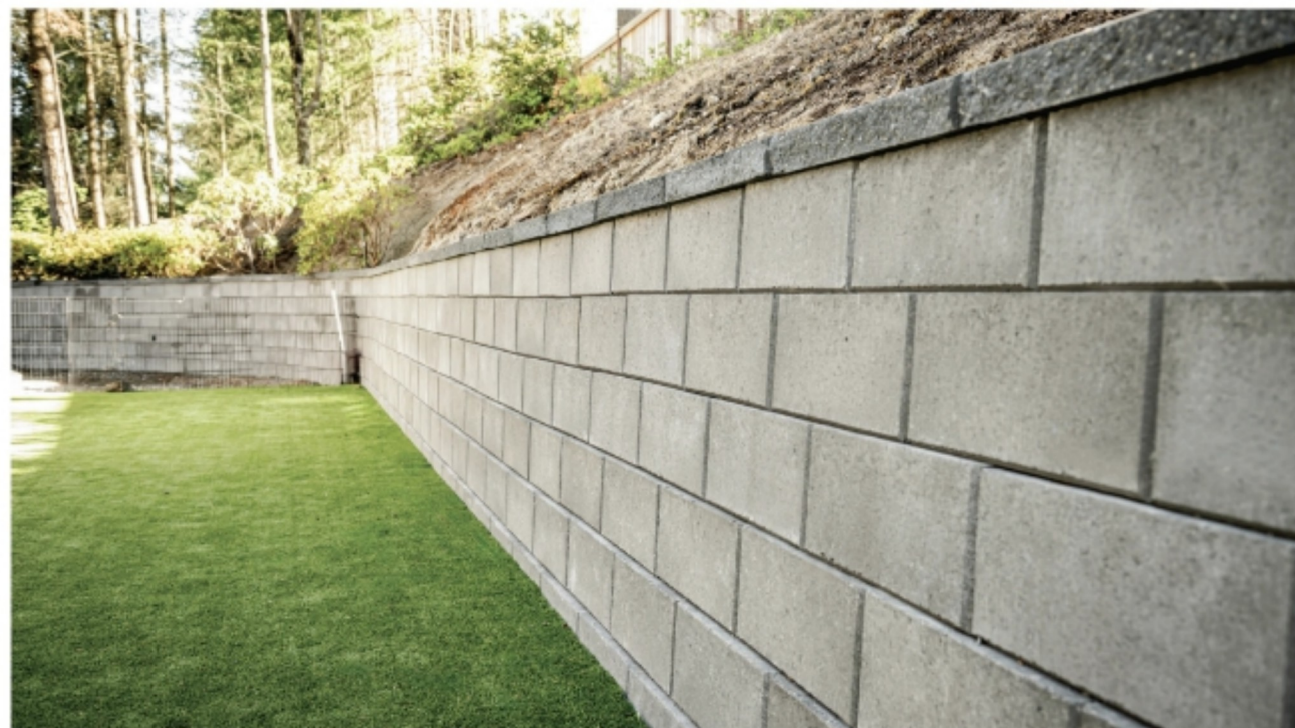

CornerStone comes in a standard split-face texture and now a smooth face option. Where split-face suits a naturalistic, textured wall that blends into the landscape, smooth face brings a cleaner, more modern look to patios, courtyards, and contemporary outdoor spaces. Same F-100 series functionality for gravity-and geogrid-reinforced retaining walls.

Gravity walls build to four feet without reinforcement. For anything taller, the wall needs to be engineered. Your local branch can point you to the right resources.

RETAINING WALL BLOCK

CYPRESS STONE®

CypressStone offers a quarried stone appearance that works across landscape and garden projects. It handles grade changes cleanly and can increase usable space for patios and terraces. The system is complete, including corners and coping units to finish the wall. Straight walls, curved walls, and steps can all be constructed to take maximum advantage of the existing terrain. Easy to install, simple to maintain.

Gravity walls build to four feet without reinforcement. For anything taller, the wall needs to be engineered. Your local branch can point you to the right resources.

AVAILABLE COLORS

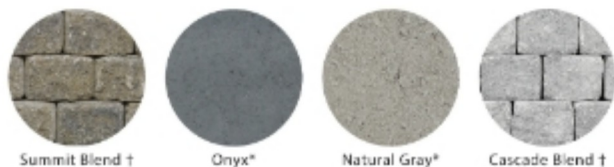

ROMAN CYPRESS®

Roman Cypress goes through a tumbling process that rounds the edges and corners. The result is a natural, weathered appearance that reads as stone rather than concrete. It's a complete system, including corners and coping stone. Straight walls, curved walls, and steps can all be constructed, and Roman Cypress can be substituted for any CypressStone application. The most popular look in segmental retaining walls, for good reason.

Gravity walls build to four feet without reinforcement. For anything taller, the wall needs to be engineered. Your local branch can point you to the right resources.

RETAINING WALL BLOCK

MANORSTONE®

Some projects need a single straight wall. Others need curves, steps, planters, and a garden that works with the slope rather than against it. ManorStone handles all of it. The block comes in several shapes: flat-face and radius, straight-sided and tapered. Mix them to build what the space actually calls for. A curved garden bed that follows the yard's natural grade. A terraced slope that turns a problem into a feature. Steps that connect one level to the next without feeling like an afterthought. Each unit is scored on the bottom, so you can split it into a half block on site. Clean cuts, less waste, better fit. ManorStone gives you the pieces to do it right.

Gravity walls build to four feet without reinforcement. For anything taller, the wall needs to be engineered. Your local branch can point you to the right resources.

RETAINING WALL BLOCK

MANORSTONE® ELITE

A hollow core makes ManorStone Elite 35% lighter, and that shows up over a full day of work. Less strain on the body, faster progress on the project. Two textures to choose from: split face in Gray, with the natural variation of a cut surface; smooth in Charcoal clean and consistent for a more contemporary look.

Gravity walls built to four feet without reinforcement. For anything taller, the wall needs to be engineered. Your local branch can point you to the right resources.

RETAINING WALL BLOCK

TUSCANSTONE®

TuscanStone looks like it has been there for generations. The hand-chiseled surface and sun-aged character read as stone that has earned its place in the landscape.

One size, two colors, enough to build what the space calls for. Fireplaces, fire pits, planters, benches, seating walls, and water features. Built for walls up to 24 inches. Start a project or add to what's already there.

BARKMAN™

Barkman products bring a range of finishes and profiles that work across a wide variety of design intentions. From the linear precision of Broadway Planks to the irregular character of Architectures, there is a surface for walls that need to do more than hold grade. The collection covers retaining walls, slabs, and decorative elements, with enough range to carry a design from the ground up.
